

Bulk Reviews API Documentation

Overview

The bulk reviews endpoint allows customers to submit reviews for multiple products at once, typically used when reviewing all products in an order.

Endpoint

POST /api/Review/AddBulkReviews

Request Format

The request uses `multipart/form-data` with the following structure:

Form Fields

1. reviewsData (required)

A JSON string containing the bulk review request data.

Structure:

```
{
  "customerId": 123,
  "reviewerName": "John Doe",
  "companyCode": "COMP001",
  "reviews": [
    {
      "productCode": "P001",
      "articleNumber": "A001",
      "rating": 4.5,
      "reviewTitle": "Great product",
      "reviewText": "Really enjoyed this product. Quality is excellent."
    },
    {
      "productCode": "P002",
      "articleNumber": "A002",
      "rating": 5.0,
      "reviewTitle": "Perfect!",
      "reviewText": "Exactly what I needed."
    },
    {
      "productCode": "P003",
      "articleNumber": "A003",
      "rating": 3.5,
      "reviewTitle": "Good but could be better",
      "reviewText": "Product is okay, but packaging could be improved."
    }
  ]
}
```

2. attachments_{index} (optional)

File attachments for each product review, where `{index}` corresponds to the review index in the array (0-based).

Examples:

- `attachments_0` : Files for the first product (index 0)
- `attachments_1` : Files for the second product (index 1)
- `attachments_2` : Files for the third product (index 2)

File Constraints:

- Maximum 10 files per product
- Maximum file size: 50MB per file
- Allowed image formats: .jpg, .jpeg, .png, .gif, .webp

- Allowed video formats: .mp4, .mov, .avi, .webm

Request Example (cURL)

```
curl -X POST "https://your-api.com/api/Review/AddBulkReviews" \
-H "Content-Type: multipart/form-data" \
-F 'reviewsData={
  "customerId": 123,
  "reviewerName": "John Doe",
  "companyCode": "COMP001",
  "reviews": [
    {
      "productCode": "P001",
      "articleNumber": "A001",
      "rating": 4.5,
      "reviewTitle": "Great product",
      "reviewText": "Really enjoyed this product."
    },
    {
      "productCode": "P002",
      "articleNumber": "A002",
      "rating": 5.0,
      "reviewTitle": "Perfect!",
      "reviewText": "Exactly what I needed."
    }
  ]
}' \
-F "attachments_0=@/path/to/image1.jpg" \
-F "attachments_0=@/path/to/image2.jpg" \
-F "attachments_1=@/path/to/video1.mp4"
```

Request Example (JavaScript/Fetch)

```
const formData = new FormData();

// Prepare review data
const reviewsData = {
  customerId: 123,
  reviewerName: "John Doe",
  companyCode: "COMP001",
  reviews: [
    {
      productCode: "P001",
      articleNumber: "A001",
      rating: 4.5,
      reviewTitle: "Great product",
      reviewText: "Really enjoyed this product."
    },
    {
      productCode: "P002",
      articleNumber: "A002",
      rating: 5.0,
      reviewTitle: "Perfect!",
      reviewText: "Exactly what I needed."
    }
  ]
};

// Add JSON data as string
formData.append('reviewsData', JSON.stringify(reviewsData));

// Add attachments for first product (index 0)
formData.append('attachments_0', file1); // File object
formData.append('attachments_0', file2); // File object

// Add attachments for second product (index 1)
formData.append('attachments_1', file3); // File object

// Send request
const response = await fetch('/api/Review/AddBulkReviews', {
  method: 'POST',
  body: formData
});

const result = await response.json();
console.log(result);
```

Response Format

Success Response

```
{
  "status": "Success",
  "message": "3 out of 3 reviews submitted successfully.",
  "data": {
    "successCount": 3,
    "failureCount": 0,
    "totalCount": 3,
    "results": [
      {
        "productCode": "P001",
        "articleNumber": "A001",
        "success": true,
        "message": "Review submitted successfully."
      },
      {
        "productCode": "P002",
        "articleNumber": "A002",
        "success": true,
        "message": "Review submitted successfully."
      },
      {
        "productCode": "P003",
        "articleNumber": "A003",
        "success": true,
        "message": "Review submitted successfully."
      }
    ]
  }
}
```

Partial Success Response

```
{
  "status": "Success",
  "message": "2 out of 3 reviews submitted successfully.",
  "data": {
    "successCount": 2,
    "failureCount": 1,
    "totalCount": 3,
    "results": [
      {
        "productCode": "P001",
        "articleNumber": "A001",
        "success": true,
        "message": "Review submitted successfully."
      },
      {
        "productCode": "P002",
        "articleNumber": "A002",
        "success": false,
        "message": "Rating must be between 1 and 5."
      },
      {
        "productCode": "P003",
        "articleNumber": "A003",
        "success": true,
        "message": "Review submitted successfully."
      }
    ]
  }
}
```

Error Response

```
{
  "status": "UnSuccess",
  "message": "Customer not found or inactive.",
  "data": null
}
```

Validation Rules

Request Level

- `customerId` is required and must be > 0
- At least one review must be provided
- Customer must exist and be active

Review Level (per product)

- `productCode` is required
- `articleNumber` is required
- `rating` is required and must be between 1.0 and 5.0
- `reviewTitle` is optional
- `reviewText` is optional

Attachment Level (per product)

- Maximum 10 attachments per product
- Each file must be ≤ 50MB
- Only allowed image/video formats

Important Notes

1. **Optional Reviews:** Not all products need to be reviewed. You can skip products by simply not including them in the reviews array.
2. **Independent Processing:** Each review is processed independently. If one fails, others will still be processed.
3. **Reviewer Name:** If `reviewerName` is not provided, it will be automatically set to the customer's first and last name.
4. **Attachment Indexing:** Attachments are matched to reviews by their index in the array. Make sure the index in `attachments_{index}` matches the position of the review in the reviews array.
5. **No Editing:** Reviews cannot be edited once submitted.
6. **Auto-Approval:** All reviews are automatically approved (`IsApproved = true`).

Error Codes

Status	Description
Success	All or some reviews submitted successfully
UnSuccess	Validation error or no reviews succeeded
Error	System error occurred

Use Cases

1. Order Completion Review

After an order is delivered, customers can review all products in that order at once.

2. Selective Product Review

Customers can choose to review only specific products from an order, skipping others.

3. Review with Media

Customers can attach photos and videos to their reviews for each product.

Comparison with Single Review Endpoint

Feature	Single Review (/AddReview)	Bulk Review (/AddBulkReviews)
Products per request	1	Multiple
Request format	Form data	Form data with JSON string
Attachments	Direct form files	Indexed form files
Use case	Product detail page	Order review page
Transaction	Single	Independent per product
